New Menu implementation to leave more screen space for documents.
Collapsible Folders view to allow for full screen document view.

SEARCH ENHANCEMENTS

Customizable Search Screens
Configurable Category Screen
New Role – Search and Category Administrator(s)
Performance Improvements in Search

MIGRATION TO .NET

InfoRouter is now a .NET application. It has been fully ported over. Major sections of infoRouter has been re-engineered to take advantage of the new platform.
This change will allow for additional radical improvements in upcoming versions.

INFOROUTER WEBDAV

InfoRouter WebDAV allows users to work with infoRouter documents and folders without using the infoRouter user interface.
Multiple documents can be imported into and exported out of infoRouter simply by dragging and dropping. New documents can be created directly inside of an infoRouter web folder instead of having to follow the traditional method of "create and upload".

SECURITY ENHANCEMENTS

New Role – Search and Category Administrator(s)
Local Users. Users that remain local to their domains. Managed by local Domain
Manager(s).

DOMAIN ENHANCEMENTS

New Domain Types to support new features
Archive Domains
Entire Domains can now be archived
Entire domains can now be HIDDEN.

SUBSCRIPTIONS:

Subscription options can be set.
Now users can define their subscription settings by choosing the events in which they will
be notified by infoRouter. Previously in Version 6.0, subscriptions had no optional
settings. The new settings are; Modified, Changed, Approved, Rejected, Deleted, and
Moved

USER ENHANCEMENTS

Local Users. Local users are created locally and they remain local to the domain in which
they were created. They do not appear in other domains, security lists etc. They are
locally managed by Domain Managers.

PORTAL INTERFACE

Portal interface.
InfoRouter V7 supports the creation and management of multiple portals.
Default portals for users.
Customer portals that can look and behave differently than internal portals.
Entire portals can be created within minutes with the use of multiple built-in Gadgets.
Portals can be used to expose infoRouter documents without having to expose the
document library.

CONTENT MANAGEMENT

InfoRouter Content Management via Content Templates
Multiple Rendering of source text via Templates
XML Source text
Text and Template content can be displayed in portals automatically

RECORDS MANAGEMENT

DoD 5015.2 STD Records management compliant features
Archiving
Classified Documents
Retention Schedules
Disposition Schedules
Vital Documents
Permanent Records

ARCHIVING

Archive Domains can be created to allow for archiving of documents and folders.

ISO PERIODIC REVIEW PROCESS

Users can now assign Periodic ISO Review Tasks to documents.

MULTI-STEP DOCUMENT BASED WORKFLOW

Previous Document Approval Cycles that were limited to a single target for approval have been enhanced to allow for multiple steps in approval flows.

Reviews are now defined at the Domain level instead of folder level.
Documents are now submitted to flows manually.

DOCUMENT ENHANCEMENTS

Additional Document Properties to support DoD 5015.2 STD compliance
Tasks can be assigned to Documents
Documents created from infoRouter Content Templates can now be rendered in multiple formats using the same source text.

HELP IMPROVEMENTS

Context sensitive help.
Help Tab for commonly asked questions and quick access to complete help.

IMPROVED LIVE UPDATE

Customizable settings are now kept in XML format allowing for Live Update to only update core elements of infoRouter without overwriting customer customizations.

IMPROVED AUDIT LOGS

Deleted documents are now be logged in separate to log file.
Logins into infoRouter are now logged in different text file (daily)
