Windows 2003 Application Server Setup with ASP.NET Support

1. Login as Administrator
2. Click “Manage Your Server” from the Start menu
Click “Add or Remove a Role” link.
Click “Next” to continue
Wait for the wizard to collect server information.
Select the “Application Server (IIS, ASP.NET)” option from the list.

Click “Next” to continue.
Check the “Enable ASP.NET” option

Click “Next” to continue
Click “Next” to continue.
Wait for setup to copy the required files.

You may need the Windows 2003 setup CD.
Click “Finish” to finalize Application Server setup.
Your server is now an Application Server. Make sure that the description clearly indicates that your server supports ASP.NET.
