

InfoRouter iFilter Configuration

Content search in infoRouter.

INSTALL ADDITIONAL IFILTERS

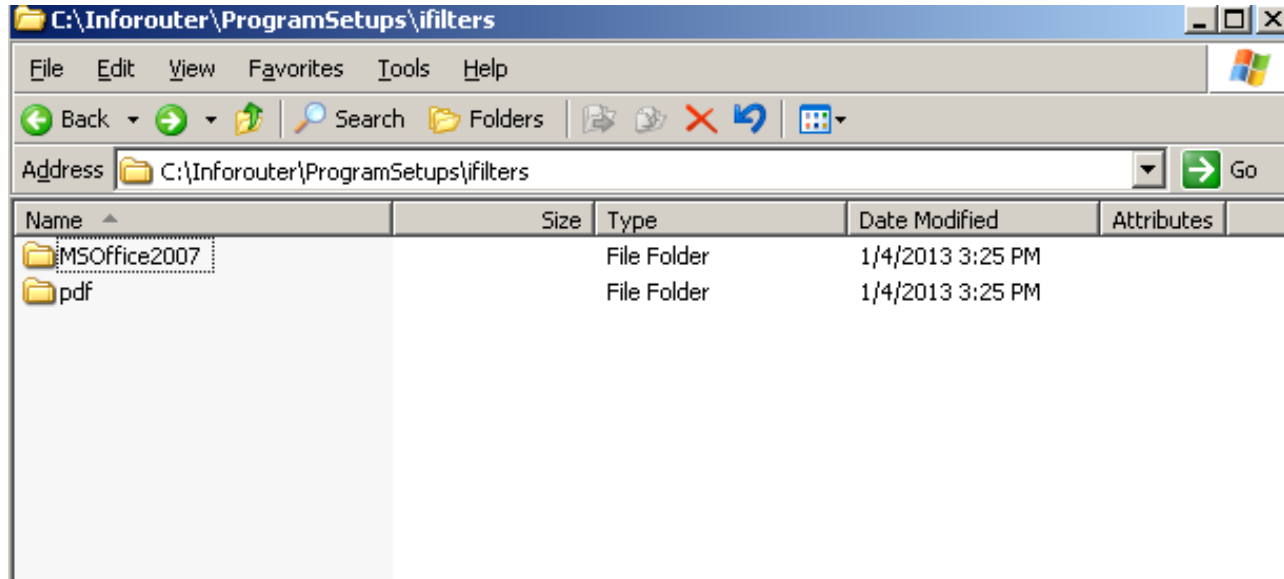

MS Index Server is able to perform full-text searches on all a handful of document types such as Text, HTML, XML etc.

To perform full text searches, MS Index Server uses objects called iFilters. iFilters are generally distributed freely by vendors for their own document formats. iFilters can also be purchased from third-party vendors.

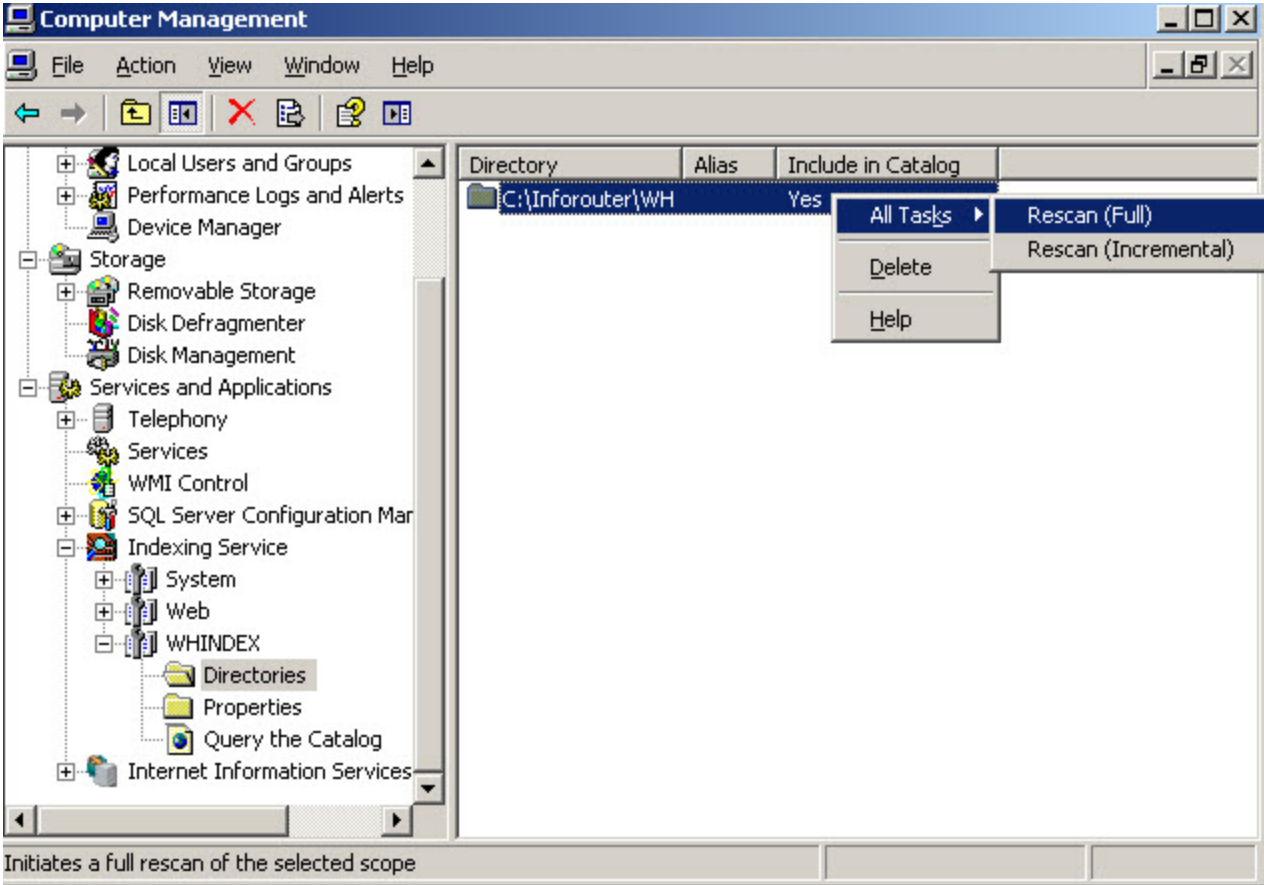

We have provided a selection of iFilters we know to be free. You can install these on your server to extend the power of MS Index Server beyond the small subset of formats natively supported by MS Index Server.

INSTALL ADDITIONAL IFILTERS

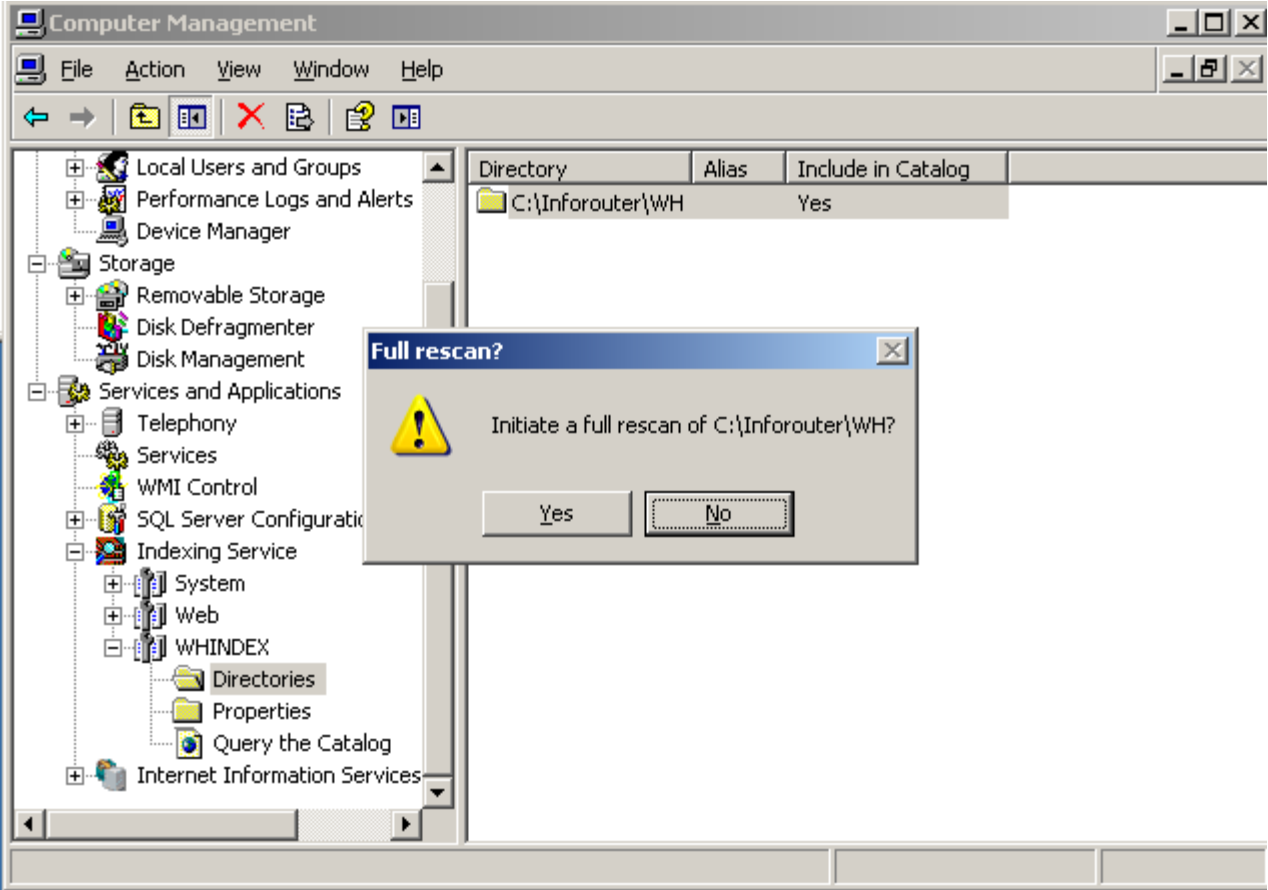

These can be found in the infoRouter install directory. The iFilters can be located under infoRouter>ProgramSetups>iFilters.

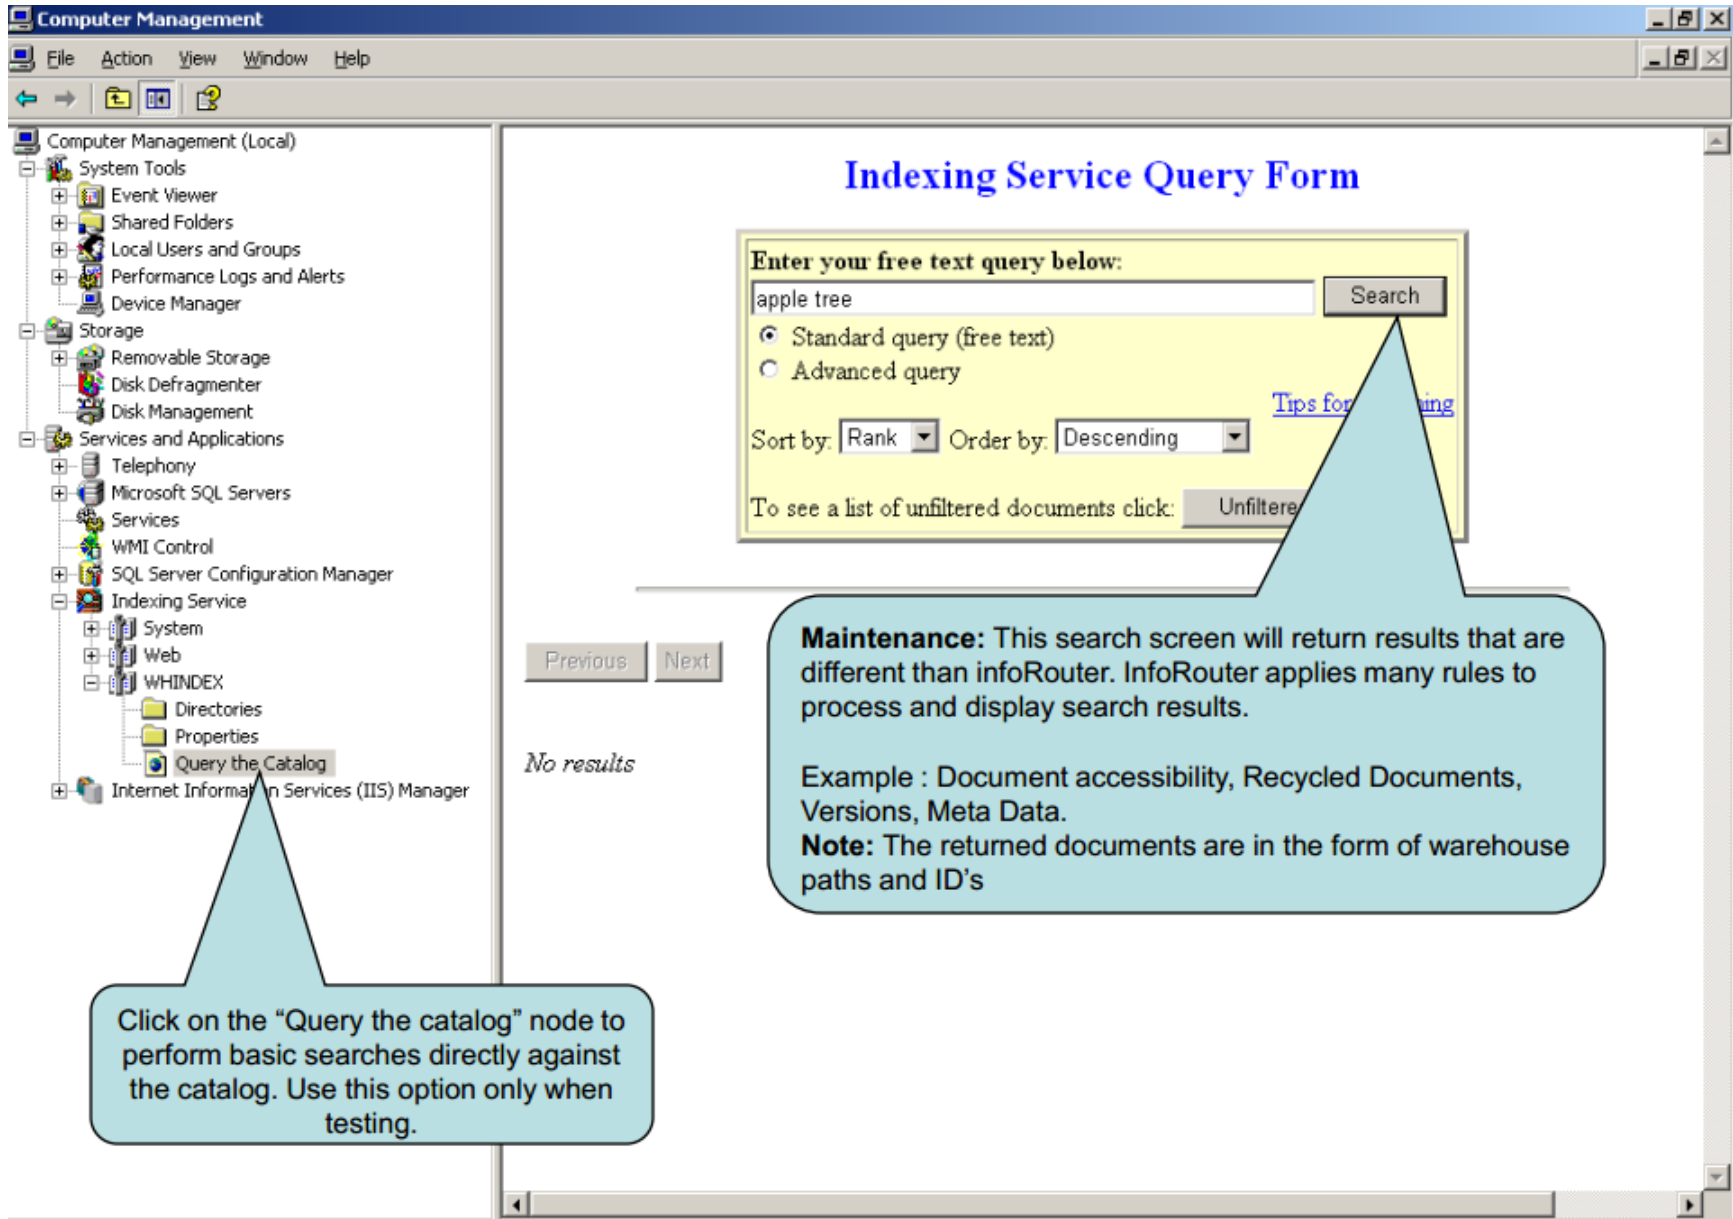

After installing iFilters, use Computer Management under the Administrative Tools to rescan the warehouse. Click on the Indexing Service and right click on the Directories Folder under the WHINDEX.

The catalog is now activated. Index Server will start the indexing process. Depending on how it is set up (tuned) Index Server might only index documents when your server is idle.

Indexing Service Query Form

Enter your free text query below:

 Standard query (free text)
 Advanced query
[Tips for searching](#)
Sort by: Rank Order by: Descending
To see a list of unfiltered documents click:

Previous Next

No results

Maintenance: This search screen will return results that are different than infoRouter. InfoRouter applies many rules to process and display search results.
Example : Document accessibility, Recycled Documents, Versions, Meta Data.
Note: The returned documents are in the form of warehouse paths and ID's

Click on the "Query the catalog" node to perform basic searches directly against the catalog. Use this option only when testing.

In the example below, a document that contains “ldap” keyword is listed in the search results. You can view a small content of the document by clicking on the “show” link near the Abstract title.

<input type="checkbox"/>	Name		Creation date	Document Id	Disposition date	Retain until	Retention schedule
<input type="checkbox"/>	 infoRouter_LDAP_Synchronization_Manager.pptx		18 January 2013 15:13:23	1469			

Ranking : 1.9%

Abstract : Active Innovations, Inc. A Document Management Company. Copyright 1998-201. 2. http:www.inforouter.com. The changes in LDAP listed below are. On-screen Show (4:3).

If you get the “No abstract available” message, this may mean that you haven’t configured the proper iFilter for this document type or MS Index Server not gotten around to index this document.

If this continues, follow the instructions to “Re-Scan” the document warehouse.
